VENTURE

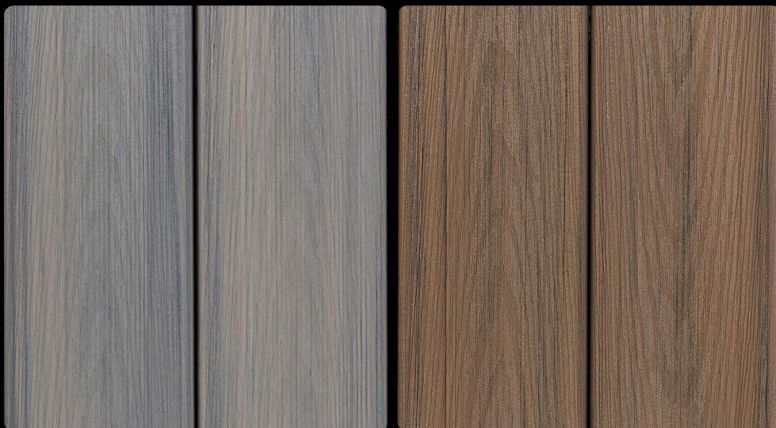

Composite Decking

Forever Vibrant No Fading

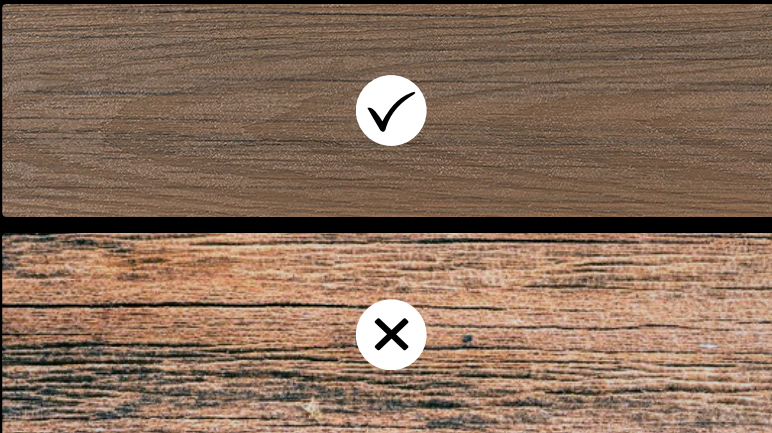

Crafted to retain its colour and vibrancy season after season. Your outdoor space will look as good as new, year after year.

Relax more, **Worry Less**

Unlike wood, Venture is resistant to rotting, staining, fading, and decay, offering a beautifully strong deck with minimal upkeep.

Easy Install Quick & Simple

Designed for simple installation, our decking allows you to quickly and effortlessly create a stunning deck. Perfect for DIY enthusiasts or pro installers.

Engineering Excellence

25 Year Warranty

With a warranty that covers structure, colour fading and surface stains, you can trust our boards to stand the test of time.

Sun-Smart Technology

UV Weather Stable Properties protect your deck from fading and damage, keeping its colour vibrant through all seasons.

Step With Confidence

Our Anti-Slip Surface ensures safe footing, reducing slip risks for you and your loved ones.

Stay Clean

Say goodbye to algae. Our decking doesn't accommodate algae growth, ensuring a clean, low-maintenance surface.

Heat & Moisture Resilient

Limited thermal movement, resisting the effects of heat and moisture.

Got Questions?

We Have Answers.

What is Venture Decking made of?

Venture is expertly engineered by blending natural wood with robust plastic materials, each plank is masterfully co-extruded with a resilient polyethylene top layer. This results in a structure similar to wood, but with unmatched strength.

Why is Wood Cheaper?

Typical softwood decking requires treatment and, over time, is prone to rotting, splintering, or decaying. In contrast, Venture decking has been tested under accelerated weather conditions and is weather-resistant. It offers superior protection against UV damage and water absorption.

Can I Install the Deck myself, or do I Need a Professional?

Laying Venture is quick and simple, but there are factors like subframes and deck designs you might feel more comfortable leaving to the pros. If you're unsure, get in touch and we'll discuss what's best for you.

Technical Info

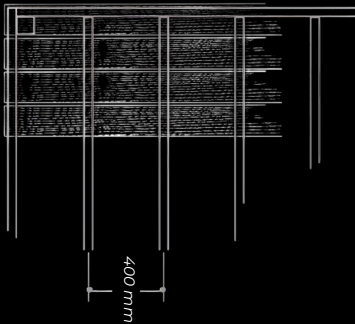

Gaps between boards – 6mm

The distance between board edges when fixed using the hidden T-clip fasteners.

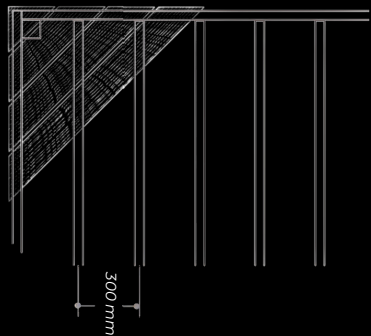

Required expansion gaps – 3-4mm

At butt joints, mitre joints or when fitting against a solid structure. (i.e. house wall)

Joist spacing – Up to 400mm for residential applications

Maximum distance between joists, measured at the centre of the joist thickness.

300mm max. for commercial applications or if laying boards diagonally.
